

THEMATIC GROUP	ANALYTICAL DIMENSION OF RISK GOVERNANCE
	MULTILEVEL INTERACTIONS
	Vertical coordination, distribution of authority and responsibilities, interaction across scales, decision-making and information flows, and articulation between formal coordination structures and multiple decision-making centers
	Create an institutional press unit responsible for coordinating the spokespersons of the different organizations, harmonizing messages, acting as a liaison between administrations and the media, and supervising accreditation systems
	Establish a differentiated system of institutional and scientific spokespersons, defining spokespersons agreed upon by each organization or scientific team, as well as political spokespersons linked to PEVOLCA. In the case of scientific spokespersons, it is proposed that they have continuous operational availability, outreach capacity to adapt technical language for the population, and specific training in both public communication and the volcanic phenomenon
	Establish bidirectional communication mechanisms between municipalities and the PAIV Information Office
	Hold periodic update and coordination meetings
	Incorporate specific recommendations adapted to each municipal plan
	Have alternative channels available in the event of possible failures of the main systems
	Define in advance the priority and most necessary channels for each territorial context.
	Check the proper functioning of the municipal units and structures involved in communication
	Ensure that each educational center checks how information is reaching families and students
	Explore and assess communication harmonization mechanisms with European exercises and protocols such as EU-Modex
	Strengthen inter-administrative coordination for the planning and execution of preventive evacuations. In this context, the use of alternative communication channels—such as Telegram or WhatsApp—restricted to official management groups is proposed in order to facilitate operational coordination among organizations during the emergency
	Establish a single official message from which the self-protection plans of essential services and the different sectors involved can be activated, also incorporating links to a web platform with permanently updated official information
	Organize the information available on that platform by sectors or thematic areas—education, tourism, agriculture, among others—and adapt it to the different target profiles and needs of the population
	Ensure the participation of official media outlets that are trained and coordinated with public administrations to ensure the dissemination of verified and rigorous information during the emergency
	Strengthen the institutional communication channels of municipalities, the Cabildo, and the Government of the Canary Islands, promoting a coordinated and coherent strategy among administrations
	Activate and use existing strategic points in municipalities for the installation of signage and public address systems, optimizing available local infrastructure for alert communication
	Rely on the communication networks and resources of the Armed Forces and the State Security Forces and Corps to strengthen operational capacity and information dissemination during the emergency
	Strengthen coordination with PROMOTUR and Turismo de Tenerife (TURISMOTF) to develop specific communication and safety protocols aimed at managing possible pull effects or unnecessary travel
	Improve communication related to maritime traffic by incorporating information on restrictions, safety measures, and associated risks
	ACTORS AND NETWORKS
	Diversity of actors and participation, formal and informal networks, cooperation among actors, shared learning, distributed leadership, and network governance
	Pay special attention to media outlets established in the Canary Islands because of their knowledge of the territory, previous experience, and specific training in emergency management
	Prioritize collaboration with public media, radio and television broadcasters, and professionals specialized in scientific outreach and risk communication
	Incorporate key local informants and relevant organizations—both local and international—into the dissemination of messages directed to the population
	Strengthen the participation of territorial actors such as local development agents, mayors, council members, local Red Cross assemblies, parishes, and predominant local associations in preventive communication and information verification processes
	Link these functions to specific training and capacity-building sessions for local informants associated with the PAIV
	Incorporate local actors and proximity-based territorial networks—local development agents, mayors, council members, local Red Cross, parishes, and community associations—into the rapid dissemination of official messages
	Link these territorial coordination mechanisms to prior training and capacity-building processes for local informants associated with the PAIV
	Rely on existing community structures and local networks to expand the reach of information
	Properly identify and differentiate the business sector, associations, collectives, and other entities involved

COMMUNICATION	Promote talks and training in neighborhood associations, schools, business associations, and hotels, preferably from the green alert level
	Strengthen training aimed at caregivers and support persons
	Incorporate more local foreign media outlets to improve the reach of information in tourist destinations
	Strengthen coordination with local informants and community networks, while also promoting a proactive role for these actors in disseminating and contextualizing information
	Create and strengthen networks of local informants, key informants, and community actors capable of facilitating the territorialized and contextualized dissemination of official information
	Adapt communication channels and formats to the needs of vulnerable groups, relying on existing institutional networks and structures, such as the Cabildo Volunteer Offices, the Island Office for Older Adults, or the Youth House Network
	Centralize and officially channel volunteer management, properly organizing citizen demand and participation during the emergency
	Recognize the role of children as a fundamental channel for transmitting information to families, promoting educational projects and the development of a Civil Protection Emergency Training Plan in non-university educational centers linked to the LOMLOE
	Strengthen coordination with local informants and community networks, while also promoting a proactive role for these actors in disseminating and contextualizing information
	Create and strengthen networks of local informants, key informants, and community actors capable of facilitating the territorialized and contextualized dissemination of official information
	Adapt communication channels and formats to the needs of vulnerable groups, relying on existing institutional networks and structures, such as the Cabildo Volunteer Offices, the Island Office for Older Adults, or the Youth House Network
	Centralize and officially channel volunteer management, properly organizing citizen demand and participation during the emergency
	Recognize the role of children as a fundamental channel for transmitting information to families, promoting educational projects and the development of a Civil Protection Emergency Training Plan in non-university educational centers linked to the LOMLOE
	Use strategic dissemination and information points such as supermarkets and pharmacies
	Explicitly incorporate groups such as homeless people and migrants
	FORMAL AND INFORMAL INSTITUTIONS
	Formal rules, protocols, procedures, institutional legitimacy, informal arrangements, and institutional adaptation
	Creation of a prior certification or accreditation system for media outlets that have participated in previous courses, drills, or emergencies
	Consider, in that accreditation, demonstrated experience, coordination with the scientific committee, and the quality and rigor of the information published
	Publication, by the Directorate General for Emergencies, of an official list of accredited media outlets, with the aim of facilitating citizens' access to verified and reliable information during emergency situations
	Inclusion in this list of accredited media outlets in other languages, to ensure accessible communication for resident and visiting foreign populations
	Ensure that official communication uses clear, accessible, and understandable language, prioritizing Spanish in audiovisual media and complementing it with accessibility and inclusion mechanisms, such as subtitles in other languages, sign language interpretation, or QR codes providing access to multilingual information
	Messages should incorporate basic information about the phenomenon, self-protection measures, responsible actors, and explicit references to official sources
	Design brief, calm, and contextualized institutional messages capable of communicating the evolution of the phenomenon, foreseeable scenarios, and specific recommendations adapted to the different risk areas, while avoiding unnecessary alarm
	Incorporate audiovisual and accessible formats such as videos, pictograms with unified criteria, QR codes, and infographics that facilitate public understanding and training
	Use multiple dissemination channels: SMS, WhatsApp, Telegram, public address systems, public screens, and social media
	Ensure common criteria for accessibility and inclusive communication
	Update and diversify the communication channels used in the educational sphere
	Strengthen the implementation of drills and monitoring mechanisms for preventive communication
	Establish official points for receiving information from citizens and organizations about rumors or hoaxes in circulation
	Develop mechanisms for analyzing and evaluating detected hoaxes, assessing the risk and potential severity for the population
	Identify, analyze, and assess the scope and severity of detected hoaxes
	Evaluate severity from both a quantitative perspective—repercussion, number of posts, reach, or followers—and a qualitative perspective, considering the content and potential impact of the information disseminated
	Based on this assessment, strengthen official communication on the affected issue or proceed with a specific rebuttal of the hoax when its severity requires it
	Assess the creation of specific channels or the designation of responsible persons for the management and correction of false information

	After analyzing the scope and severity of the hoax, strengthen the dissemination of verified information or issue an official rebuttal when necessary
	Prepare clear, concise, and easily understandable messages
	Incorporate practical preparedness and self-protection recommendations
	Include guidance on important documents, necessary medication, and availability of cash
	Include essential information in a clear and visually striking manner
	Incorporate emergency contacts
	Ensure linguistic accessibility and accessibility for people with disabilities
	Strengthen specific training for municipal staff in communication and emergency management
	Properly communicate the uncertainty associated with the volcanic phenomenon and the existing limitations of forecasts, avoiding unnecessary alarm among the population
	Ensure communication accessibility by incorporating different languages, pictograms, illustrations, and other visual resources that facilitate message comprehension
	Accompany the information with specific guidance on available resources and the differentiated needs of each group, especially in the case of vulnerable populations, tourists, or temporary residents
	Adapt messages to the different social profiles, sectors, and territorial contexts affected by the emergency
	Repeatedly remind the population of the importance of relying only on official sources and verifying the information received
	Adjust the content and intensity of messages according to the level of misinformation or circulation of rumors detected at each moment
	Normalize the population's emotional reactions during emergency situations, while also facilitating free access to qualified psychological and emotional support personnel
	Complement regular channels with alternative means of dissemination, such as radio, public address systems, drones, or SMS alert systems, especially in scenarios involving network failure or difficulties accessing information
	Incorporate direct links to web pages and official sources of updated information in alert messages sent by SMS
	Differentiate population segments according to the planned evacuation and their proximity or distance from the areas of greatest risk and impact
	Recall and activate the self-protection plans of the different sectors and essential services involved in the emergency
	Inform the population about family self-protection measures, including aspects related to medication, health cards, personal documentation, housing, animals, and basic safety measures
	Incorporate a multirisk perspective that considers possible derived hazards in other areas of the island—or even on other islands—as a consequence of the eruptive phenomenon
	Inform about potential risks and expected dynamics in the rest of the island territory, promoting citizen self-protection and better emergency management
	Strengthen institutional capacity to reaffirm and disseminate reliable information through official and verified sources
	Incorporate people linked to animals, including livestock farmers, pet owners, and the management of stray animals
	Strengthen door-to-door strategies and loudspeaker systems
	Adapt tourism communication by differentiating between people staying in hotels, vacation rentals, and temporary residents
	Create a specific unit for the analysis, monitoring, and management of hoaxes and disinformation
